Before beginning the installations process, make sure that the clinic understands and accepts the following:

Dedicated PC

The clinic needs to have a dedicated PC to host the SkyPACS 365 client that is online **24/7**.

Confirm that the PC runs windows 8.1 or later on a 64 bit system.

Modality supplier

The clinic needs to know the name of their modality-supplier.

Later in the process **you'll need to contact this supplier** in order to direct the modality to the SkyPACS 365 client.

Internet speed

The clinic needs to know the **speed of their internet connection**.

You may want to contact their IPS to confirm that the information is correct or perform a speedtest yourself.

When the above is confirmed, you can continue to the next step.

SkyPACS 365 eliminates the hassle of storage and handling of DICOM files (CR/DR/UL/CT/MR) and integrates with all online, digital screens. The system is fast to implement, easy to use and has a built-in, user-friendly DICOM viewer. The system is one of the most user-friendly and affordable PACS-solutions on the market. What's more, SkyPACS 365 is a scalable and has the necessary features for everyday use without unnecessary and time-consuming accessories.

PACS access on the go – View or show your diagnostic images on all mobile platforms. Secure storage and backup – DICOM images of all diagnostic modalities: CR/DR, CT, MR, US. SkyPACS365 is a dependable, sturdy and secure backup solution. SkyPACS 365 has proven its ease of use and strength in a busy veterinarian life, and now works on several large animal hospitals and small animal clinics.

Digital diagnostic imaging is an essential part of modern veterinary practice. viewing, storing , retrieving and sharing DICOM images has to be fast, intuitive and easy. Many PACS systems sold to Vets are originally made for human hospital use, and thus are often cumbersome to work with, cluttered with superfluous functions – and also expensive." We are proud to introduce you for SkyPACS 365
